CONTEST

BDE_PONG

Common Instructions

Norm

- Your project must be written in C
- Your project must be written in accordance with the norm.
- Global variables are forbidden.

Valgrind

- Your functions should not quit unexpectedly (segmentation fault, bus error, double free, etc.) except for undefined behavior.
- All heap-allocated memory must be properly freed when necessary. Memory leaks will not be tolerated.

Makefile

- Your Makefile must contain at least the rules $(NAME), all, clean, fclean and re.
- The Makefile that compiles your source files to the required output with the flags -Wall, -Wextra, and -Werror, using cc. Additionally, your Makefile must not perform unnecessary relinking.

Other

- If your project use your libft, you must copy its sources and its associated Makefile into a libft folder. Your project's Makefile must compile the library by using its Makefile, then compile the project.
- Submit your work to the assigned Git repository. Only the work in the Git repository will count.

The project

Program Name	`./{{your_login}}`
Files to Submit	`*/*.h */*.c`
Makefile	`NAME, all, clean, fclean, re`
External Function	◦ All functions from the standard library. ◦ Any clock-based library. ◦ The ncurses library.
Libft authorized	**Yes**
Description	**A Pong game in the terminal**

About the project

Here are the basic requirements:

- The game must be 2-player.
- The display must use the ncurses library.
- Each player have a paddle they can move.
- Displaying score on the screen.
- The game should have frame-based timing.
- Each game should be winnable.
- A player wins when they score a 5 points.
- A player scores a point when the ball hit the other side of the screen.
- The ball should bounce on player paddles and walls.
- The player should be able to aim the ball using the edges of its paddle
- The program should end when a player wins the game.

For those of you who have never made a video game, here's how a very basic game should run:

- Acquire input (Player controls, network, etc.).
- Update game entities. • Render display.
- Repeat until the game ends!

Submission

Submit your assignment in a branch from this Git repository. The branch must be named by your login. When it's done, you can make a pull request, it will be merged by an admin. Don't hesitate to double check the names of your files to ensure they are correct.

Feel free to organize your files as you wish as long as you turn in the mandatory files and comply with the requirements.

Don't forget norm and memory leaks !

If something is not clear, you can take a reference the original BDE_PONG subject or contact amblanch or rgodet on Discord.

You have until April 26th at 9:42 PM to submit the project.

Good luck :)
